

## Removal Assessment Contact Notes

Phone discussion between OSC Michael Boykin (MB) and Lisa of Blue Mountain Divers (BMD) on April 18, 2019.

MB – initiated call to Lisa of BMD

BMD – reported that to Oregon Department of Environmental Quality in August and October 2018, that they found a couple of 55-gallon drums labeled as 2,4-D and 2,4,5-T Weedkiller at the south end of Wallowa Lake.

BMD – after multiple dives they have found 25 Weedkiller labeled 55-gallon drums on the lake bottom but they all appeared to be rusted and broken and not holding any Weedkiller contents.

BMD – They also estimated that they found an estimated 12 100-gallon drums also labeled the same way as Weedkiller. They appear to be heavier duty drums that are intact with no evidence of rust/corrosion.

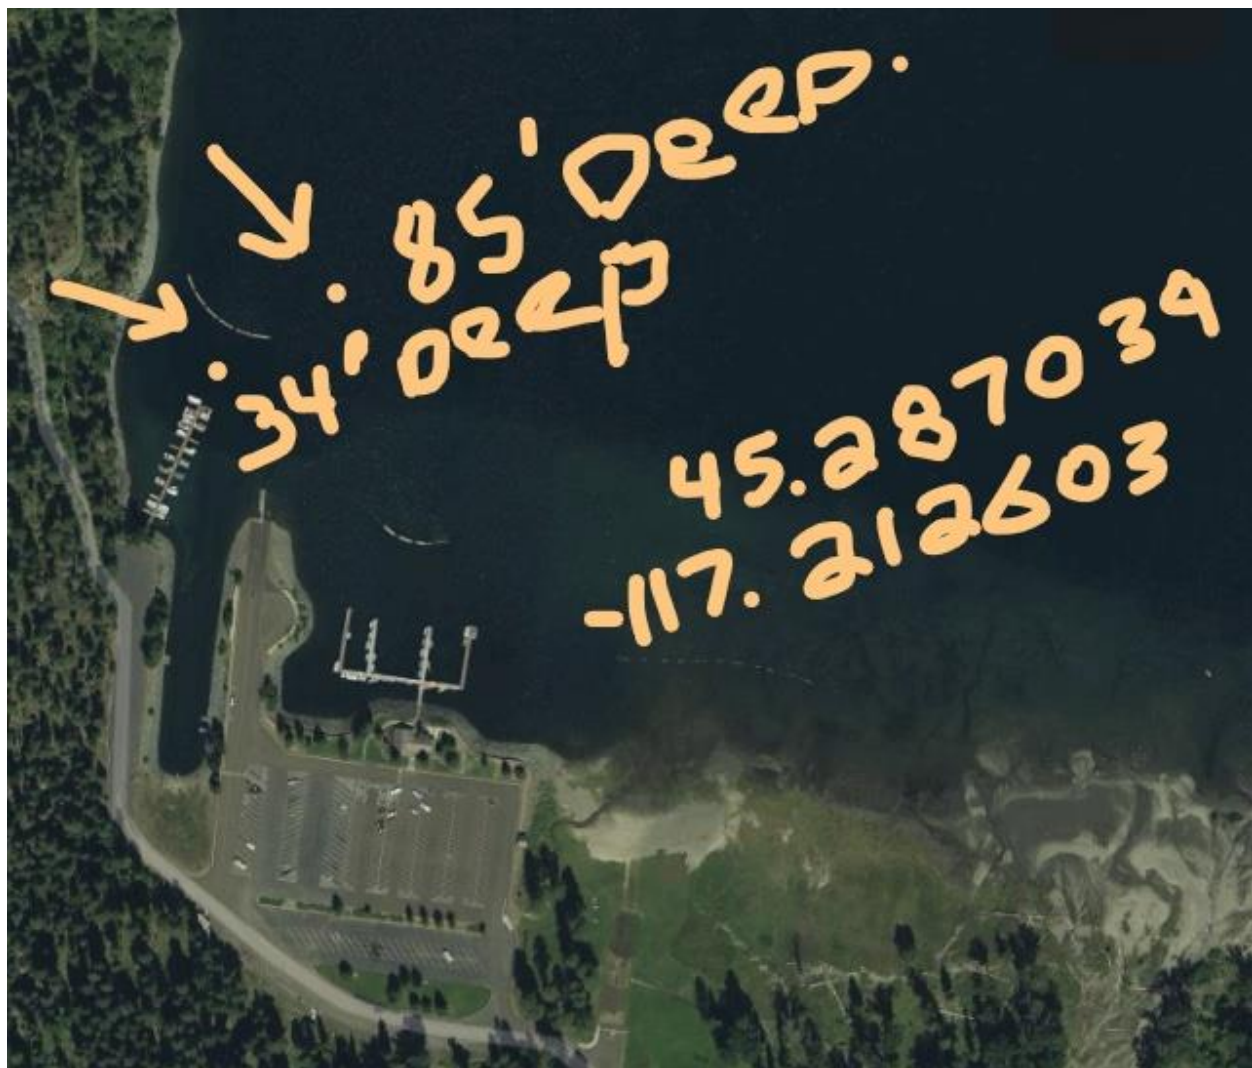

BMD – They have posted a video on Facebook of the first Weedkiller drum they found during a dive on August 16, 2018. They stated that it was commercial weedkiller.

BMD – stated that the drums are located east of the south state park boat ramp in water 85 to 100 feet deep. They will send an email of some still photographs, where video is posted on Facebook, and a map of the drum locations.
